

Tornado and Sobol agree on ranks 1 to 7; they swap ranks 8 and 9, where both total-order indices are below 0.001

Source: this study. One-at-a-time tornado over plant_npv, all other parameters held at their triangular mode; power price has no mode (uniform band), held at 0.07 USD/kWh. Shaded band is the 20,000-draw Monte Carlo P10 to P90, seed 42. Blue arm = NPV rises, red arm = NPV falls. Bands are ASSUMED, not assays.
